At Catenda, we've spent the last 13 years democratizing the use of open data in the overall infrastructure and building industry, from design to maintenance. We've built an incredible ecosystem of open tools that everyone in the AECOO industry can use to share and communicate data in a user-friendly and empowering way. Workflows are digitized and frictionless, 3D visuals are amazing, insights are powerful and data is stored and accessible to the right people at the right time.

the open
way

Catenda

ABOUT CATENDA

Catenda is building a cloud-based ecosystem to bring the open culture into the construction industry, from design to maintenance!

Our ambition is to make the industry more sustainable: meaning employee well-being, sustainable construction, cost efficiency and minimizing waste. That is the reason why for us, it is about more than just providing an effective BIM platform. It is about having a measurable positive impact. And we strongly believe that the openness in data, in the method to approach and the way of thinking is the key to attain our goals.

We have spent more than a decade to build up a firm and secured ecosystem aligned with the international open standards. Your data is yours, and you can access it anytime you need.

Our 4 main solutions, Catenda Hub, Catenda Site, Catenda Boost and Catenda Duo will get you covered throughout the whole project's lifecycle, from organizing data, facilitating collaboration, supervising construction sites, advancing your existing systems to managing maintenance.

Catenda carries an international DNA with head quater set in Oslo, Norway; team, partners and clients dispersed around the globe. With an open approach, multi-cultural background and years of experience, we are proud and confident to address the huge challenges in today's built assets industry.

Catenda, the open way!

OUR CORE VALUES

We want to be open

Openness is our core value and we share it from day one with all team members. We believe that openness is the best way to work together and we have always promoted an open way of communicating. Feeding our curiosity, working hard to make our knowledge accessible to everyone through open-source formats, and nurturing an international culture as a

We strive for quality

We help build long-lasting edifices and infrastructure, and our goal is to prevent any issues with quality. As we strive for quality, we are continuously improving our products, and focusing on the results generated. Our clients choose to stay with us because they believe we offer the best solution.

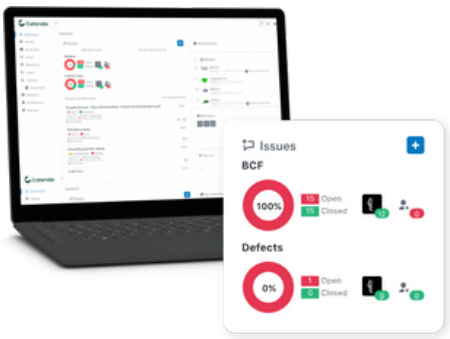
We focus on building trust

Because of our involvement, we are recognized as trusted partners. With Catenda, you can be confident that your data is safe and stored 100% according to open standards. We do not believe in vendor lock-in. Your data is yours, and you can access it anytime you need.

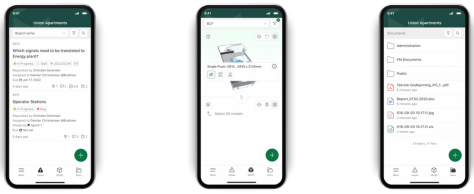
CATENDA ECOSYSTEM

Catenda Hub

Catenda Hub (previously known as Bimsync) is a common data environment that helps construction and infrastructure actors to manage their projects. The open standards-based cloud platform allows to exchange information, schedule, planning, assign issues, and centralize all project data (2D plans, 3D models, documents etc.).



Catenda Site



Catenda Site is an on-site BIM application. The features allow you to access your Catenda Hub projects on site, and so manage the issues, access your plans via the application.

Catenda Duo

Catenda Duo (formerly Catenda BOS) is a platform that allows you to collect all the data of the buildings and optimize them. This easy to use Building Operations System enables to reduce the environmental impact of your buildings.

Catenda Boost

Catenda Boost is a rich set of software building blocks, allowing you to extend your existing software, or build new innovative BIM solutions to boost your digital workflows.
