# CoMech Metrology

## CoMech Metrology in the Aerospace Sector

**W**hen you need metrology solutions, think CoMech. CoMech has been around since 1985 and continues to grow year on year.

CoMech Metrology is well known in the rail sector and it's where its roots really began. However, CoMech has expertise and proficiency in the automotive and aerospace sectors too.

CoMech Metrology has worked with some of the biggest names in the UK transport industry and they trust CoMech for its solutions. In addition, CoMech provides accredited calibrations to many other national brands too.

We pride ourselves on making measurement solutions stress-free and more accessible. We keep up with changing regulations and innovate new technology for compliance within the industry.

### CoMech Metrology's Story

One thing about CoMech is we're hungry for growth and we've gone from strength to strength over the years, not just growing our team but keeping up with and innovating for new technology compliance and regulations within the industry.

The expansion of the company led to moving the compliance, administration, sales, marketing, logistics

and finance departments to the RTC (Rail Technical Centre) in 2016. In 2021 following further growth, these departments along with the electrical and pressure calibration departments were then moved to larger premises on Pride Park. This was a significant step towards providing scope for future growth into other sectors in addition to rail – such as aerospace, automotive and general high-tech engineering.

We've never quite lost the 'small business' care though. Our team works together to give our customers the best experience, as we like to say at CoMech, we're big enough to deliver but small enough to really care.

The home to our ever-growing team and accredited laboratories is located at the centre of the UK's rail industry in Derby, East Midlands. The rail sector feels like home to us since this is where our roots began, but in 37+ years of service, we have developed expertise and proficiency in various other industries including: aerospace, engineering and food & beverage.

If you've heard of CoMech it's probably because our reputation for quality and trust has led us to supplying some of the nation's biggest brands. We work tirelessly to make sure our clients receive high-quality, uncompromised service and solutions.

Our talented team works from our purpose-built laboratories and works alongside our customers to find the right solution for all their metrology needs. Our uncompromising commitment to investing in skills, resources and facilities is reflected in the extensive range of services that meet the highest industry standards.

## CoMech Metrology's Mission Statement

'When Measurement Matters Most'

## CoMech Metrology's Core Values

- **Integrity** – We respect each other, no matter who you are or what you do. We are friendly, honest and act in a professional manner, always.
- **Inclusivity** – Everyone is equal. We value our differences as a strength. We support each other to

share ideas and fulfil our potential.

- **Initiative** – We are a proactive and solution-focused team. We are also a team that is ambitious and aspirational.
- **Motivated** – We have passion, pride and a positive can-do attitude. We continuously seek to innovate and raise the bar.
- **Team Player** – We collaborate, support and motivate each other. We all roll our sleeves up and get stuck in. We own it and don't pass it off as someone else's problem.
- **Trust** – We look out for each other, our safety and our wellbeing. We rely on each other as a team to deliver.

## CoMech Metrology Industries

CoMech provides services for various industries including: railways, aerospace, automotive, food & beverage, utilities, engineering, civil engineering and various other industries.

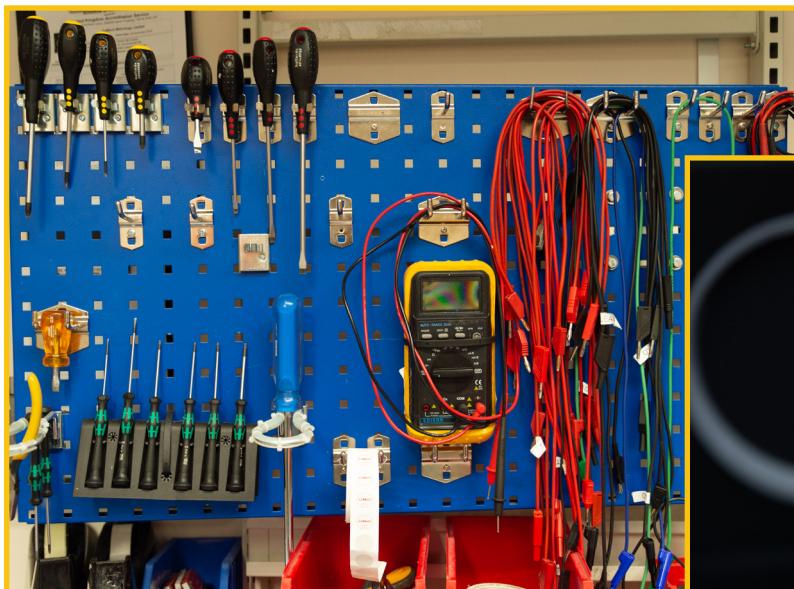

## CoMech Metrology – Services in The Aerospace Industry

CoMech is highly experienced in providing preventative solutions and hassle-free services you can trust for the aerospace industry in particular.

CoMech Metrology is an industry leader in offering preventative maintenance to avoid reactive solutions and tracking software for audit compliance whilst proving the go-to place for equipment calibrations and UCAS-approved metrology supplies.

Crucial regulations for safety and performance in the aerospace industry are always advancing, making it essential to keep up to date and compliant. CoMech Metrology offers expert solutions within the aerospace industry to keep companies on track and ensure essential regulations are met.

Where critical precision matters in the aerospace industry, CoMech is there to provide hassle-free solutions. CoMech's measurement and calibration

services offer precision you can truly rely on time and time again.

Work closely with CoMech Metrology to develop long-term solutions that future-proof companies within the aerospace industry and minimise any costly downtime.

## CoMech Metrology Aerospace Services

- **Compliant Calibration Services** – Our in-house calibration laboratories are accredited to carry out calibration of your specialist equipment, regardless of your industry.
- **HAV Assessment** – Protecting your employees from dangerous over-exposure to vibrations causing HAVS, by assessing your tools and calculating a safe level and recommending a safe limit for daily use.
- **PAT Testing** – Meet health and safety regulations with portable appliance testing (PAT) of electrical equipment, ensuring that it is safe to use.
- **On-Site Services** – Our accredited engineers can come to your site, when convenient for you, to test and assess your equipment to meet your business needs.
- **Asset Management** – TrackRecordPro is an asset management system that allows you to keep

track of all your items' calibration states, HAV assessments and PAT tests all in one place. It features easily accessible records and reminders ensuring you remain compliant.

- **CoMech Supplies** – CoMech Supplies is the go-to hub for industry-specific specialist equipment, supplying companies with essential products for all your customer safety, tooling and engineering needs.
