

# Mallaghan

## A Specialist in Ground Support Equipment for 60 Years

Originally established as a civil engineering firm in the 1960s, the company was founded by Terry Mallaghan and has now become one of the leading aviation industry suppliers in the manufacture of airport ground support equipment, producing highly acclaimed GSE products to an ever-expanding global network of customers.

Mallaghan counts some of the world's leading airlines and ground-handling companies among its prestigious clientele.

All Mallaghan GSE products are tailored to customers' own specific requirements. With elite expertise in the field of engineering sciences, Mallaghan can ensure all equipment is at the fore of advanced technologies, and with a keen emphasis on environmentally friendly applications, this guarantees that the customer receives the best-possible return on their investment.

The company, located in Ireland, attributes its move towards the manufacture of high-quality GSE following extensive research throughout Europe and the Middle Eastern regions. Terry's keen pursuits took him to many parts of these regions where he identified a need within the aviation industry for schedule streamlining.

The complete Mallaghan product range conforms to all IATA regulations and EC directives. The company is also ISO 9001:2015-certified and places a keen emphasis on complying with all external regulatory bodies associated with the manufacture of GSE products. This ensures verification of our equipment and peace of mind for our clients.

The company then embarked upon a detailed programme of research and development, the result of which has been the LBT90 and BT92, a unique multi-purpose aircraft loading system, which still remains a firm favourite within the current-day range.

After-sales support has long been at the fore of our company and we believe it to be just as important as the performance of our products. Mallaghan makes sure it provides all clients with comprehensive guidance and support in the areas of parts & service, commissioning, training, warranty and technical back-up.

The range includes:

- Catering & cabin cleaning trucks
- Motorised & towable passenger stairs
- Toilet & water service trucks
- Medical lifts
- Airbus A380 GSE range
- Bendibelt / baggage handling systems
- Maintenance platforms & rapid-delivery vehicles
- De-icers
